

A cold northwesterly airflow will bring a wintry mix of showers across Northern Ireland, southwest Scotland, parts of northwest England and north and west Wales. As temperatures fall below freezing on Saturday evening, widespread ice is likely to form on untreated surfaces, particularly where surfaces have been left wet following the showers. Wintry showers should largely die out on Sunday morning. There remains uncertainty in the extent of any snow accumulations with many areas away from hills seeing little or no lying snow.

Valid from **16:00 on Sat, 18th Feb 2012** until **11:00 on Sun, 19th Feb 2012**
